

Investment boosts capacity for Benders

Benders Paper Cup Company has recently taken delivery of a new high-speed cup forming machine as part of the company's continued investment in the growth of the business. The new high-speed machine will not only build upon Benders' reputation for quality, engineered products but is also part of the company's longer term strategy to invest back into the business.

Following extensive trials the Benders operations team is now running the machine at full production, improving both output capability and flexibility across the

business. Integrated into a robotic automated packing system, the new state-of-the-art machine will develop both capacity and process automation in the Wrexham factory.

Following extensive trials the Benders operations team is now running the machine at full production, improving both output capability and flexibility across the

business. Integrated into a robotic automated packing system, the new state-of-the-art machine will develop both capacity and process automation in the Wrexham factory.

Operations director, Steve Granville commented, "The new high-speed machine is running efficiently and meeting all of the business's anticipated goals. This particular investment has allowed the business to consolidate short run production to other machines, improving Benders' ability to respond more readily to the needs of our customers."

Following extensive trials the Benders operations team is now running the machine at full production, improving both output capability and flexibility across the

business. Integrated into a robotic automated packing system, the new state-of-the-art machine will develop both capacity and process automation in the Wrexham factory.

Operations director, Steve Granville commented, "The new high-speed machine is running efficiently and meeting all of the business's anticipated goals. This particular investment has allowed the business to consolidate short run production to other machines, improving Benders' ability to respond more readily to the needs of our customers."

Benders has recognised that

lead times have become more and more crucial as demand has grown. By investing in the high-speed machine lead times can be kept to a minimum and flexibility built into the manufacturing process for customers.

As part of its commitment to the environment, Benders not only manufactures all of its paper cups in the UK using ethically sourced raw materials from sustainable, managed forests, but is also an active member of the Paper Cup Recovery & Recycling Group.
