## **Benders NEW environmentally considerate PLA lined hot cup**

**In line with the growing environmental awareness and concerns of consumers, operators and wholesalers alike Benders are introducing their new range of PLA lined hot cups. Extending the recently introduced Verona design in a new colourway, across the 6 of the most popular hot cup sizes.**

PLA is a biodegradable, thermoplastic, aliphate polyester derived from renewable resources. It is a sustainable alternative to petrochemical-derived products, the lactides from which it is ultimately produced can be derived from the fermentation of agricultural by-products such as corn starch or sugar cane.

### **Product Specifications and Recycling**

Both the board fibre and the PLA coating are derived from managed renewable resources, trees and corn. The inks are all water based. Cups are accredited as suitable for commercial composting in compliance with EN13432 Din Certco Standard.

The inner cup sleeves are wrapped in a plain polyethylene film, this cannot currently be recycled. The outer case is made from part recycled corrugate and can be recycled after use.

### **Temperature/performance.**

The storage and handling requirements of Benders Verona PLA hot cups does not require any special conditions under normal ambient temperatures.

The PLA coating has been specially developed to accept water just off the boil.
